

## OUR MINIATURE GUIDES

Long-term lubrication unit for minimal maintenance work

The EL long-term lubrication unit makes it possible to increase the first relubrication interval of miniature guides up to 10,000 km. In many cases, this is enough for the entire life

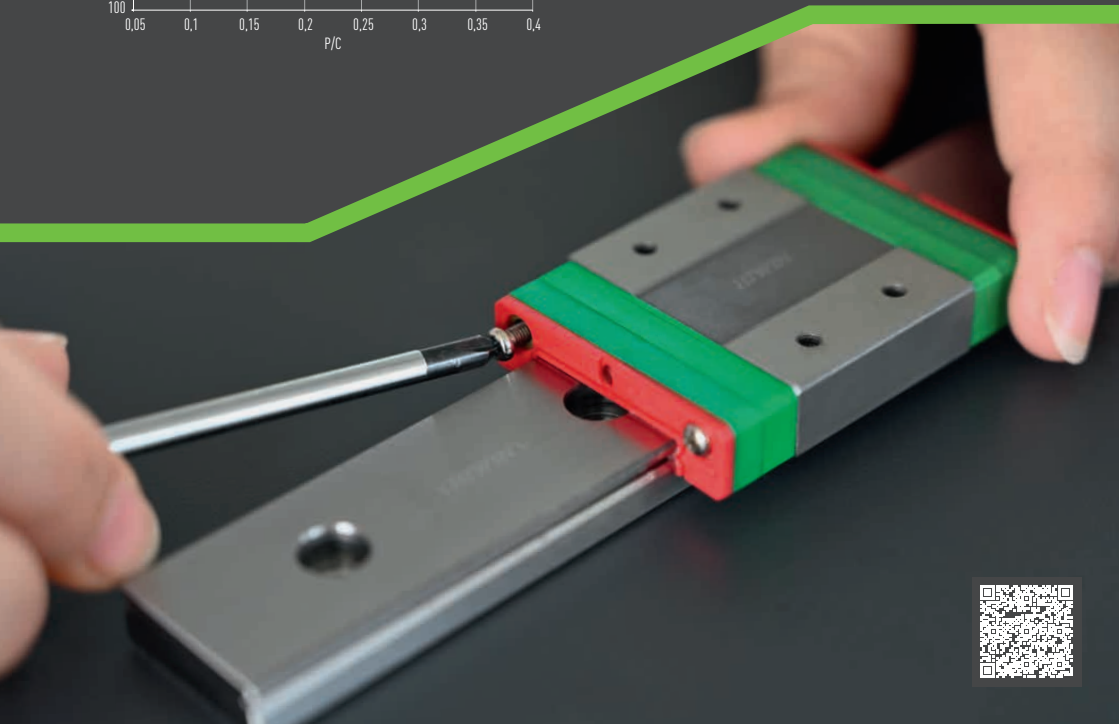

cycle. Integration is therefore particularly well suited for applications that are designed for long-term, maintenance-free operation.

Relubrication intervals with grease lubrication and two-sided EL long-term lubrication unit:

Available for sizes:

- MGN07
- MGN09
- MGN12
- MGW09
- MGW12
